

COMMUNICATION FACILITIES

Communication facilities are routinely surveyed by Herrick & Salsbury, Inc. These types of facilities can include remote outlets, signal boosters, cellular communication towers, microwave relay towers, radio or television transmission towers, and rooftop antenna lease surveys.

Many times, communication facilities involve the leasing of land or a rooftop lease. We assist clients by defining the lease boundaries, access and utility easements, and communication closet leasing inside a building.

SERVICES

- Co-location tower site surveys
- Tower as-built surveys
- New site surveys
- Tower title review surveys
- Tower ALTA survey
