

WETLAND MAPPING

At Herrick & Salsbury, Inc. we provide Wetland Mapping, with the ability to map small areas of wetland or whole parcels.

In mapping for an anticipated project, Herrick & Salsbury, Inc. can assist by evaluating the potential impact the project may have and what level of permitting may be required. Usually this is done in conjunction with our permitting services.

These areas are mapped using the 1987 Army Corps of Engineers wetland delineation manual, which is the expectation of regulating authorities at the local, state, and federal levels.
